PROFESSIONAL SUMMARY

Full Stack Engineer with 5+ years of experience building and shipping scalable, high-performance web, mobile, and backend applications. Strong command of React, Next.js, Angular, Flutter, and React Native with solid understanding of frontend architecture patterns, component driven development, and state management at scale. Expanding into backend engineering with Rust and Axum — building performant REST APIs, handling concurrent workloads, and working toward full stack ownership across the delivery cycle. Experienced integrating RESTful APIs, WebSocket connections, and third-party payment gateways. Comfortable working across fintech, SaaS, legal tech, and retail domains in Agile team environments. Passionate about clean code, strong user experience, and continuously growing as an engineer.

WORK EXPERIENCE

Cytech Consult (IT Consulting) Lagos, Nigeria

March 2023 – Present

Mid-to-Senior Frontend Developer

- Designed, developed, and maintained responsive SPAs and multi page web applications using React 18+, Angular 17, and Next.js with a focus on component reusability, scalability, and cross browser compatibility.
- Applied component driven development patterns and thoughtful folder structure to keep codebases maintainable and easy for teammates to navigate and extend.
- Improved application performance through code splitting, lazy loading, and bundle size optimization achieving up to 35% faster load times across production applications.
- Collaborated closely with backend engineers to integrate RESTful APIs and WebSocket connections for dynamic data handling and real time UI updates.
- Participated in code reviews, giving and receiving feedback to maintain code quality and reduce post-release defects by 20%.
- Built and maintained reusable component libraries that sped up feature delivery and kept UI patterns consistent across the product.
- Used Git with GitHub and GitLab for version control, maintaining clean commit history and collaborative branching workflows across distributed teams.
- Worked in Agile/Scrum environments using Jira and Trello participating in sprint planning, daily stand-ups, and retrospectives.
- Wrote and maintained technical documentation for components, integration patterns, and development workflows.

Frontend Developer Intern

- Assisted in developing and maintaining web interfaces using HTML5, CSS3, and JavaScript, contributing to clean and maintainable codebases.
- Fixed UI bugs and implemented minor enhancements to improve application usability and visual consistency.
- Collaborated with senior developers during code reviews, learning industry best practices and improving coding standards.
- Performed testing and debugging of frontend components to ensure functionality and cross-browser performance.
- Documented code changes, project progress, and best practices as part of team knowledge sharing.
- Quickly adapted to new tools, frameworks, and technologies introduced by the team.
- Participated in Agile processes including daily stand ups, sprint planning, and retrospectives.

PROJECTS

Nigerian Navy School FinTech Platform Boarding School Payment System

2026

Mobile & Frontend Developer (Flutter • React • Paystack • Docker)

- Built a full fintech platform for Nigerian Navy and large boarding schools enabling parents to remotely fund their child's in-school digital wallet and monitor all spending within the school premises in real time.
- Developed the parent facing mobile application in Flutter, covering wallet top-up via Paystack, real time transaction history, and push notifications for every spend event.
- Designed and implemented a QR code verification system for student identity — each student is assigned a unique QR code that is scanned at the school store to authenticate the purchase and deduct the correct amount from their wallet automatically.
- Built the school store interface allowing store owners to scan student QR codes, process purchases, and track all transactions in real time.
- Developed the React admin portal giving school administrators full visibility over student accounts, wallet balances, transaction logs, and store activity.
- Integrated Paystack as the payment gateway for parent-to-wallet fund transfers, handling payment verification, webhook callbacks, and transaction status updates.
- Deployed the platform using Docker for consistent performance across environments.

Rust CLI & Backend Projects

2025 – 2026

Backend & Systems Developer (Rust • Cargo • CLI • Axum)

- Built a Port Sniffer CLI tool in Rust — scans network ports concurrently using threads, handles errors gracefully, and accepts IP address input via CLI arguments.
- Built a CLI Chat Application in Rust covering structs, enums, input/output handling, and Rust error management patterns.
- Built a CLI Toy Blockchain in Rust — implements block creation, SHA256 hashing, chain validation, and data integrity checks entirely from scratch without external blockchain libraries.

- Applying Rust and Axum to build REST APIs — working with routing, middleware, state management, and async programming using Tokio.
- All projects developed using GitHub Codespaces with rust-analyzer, demonstrating practical systems programming skills alongside frontend and mobile expertise.

IT Bunk Educational Payment Platform

2026

Fullstack Developer (Next.js • Node.js • Express • Paystack)

- Built a full stack educational payment platform enabling students to make payments for school fees and institutional charges seamlessly.
- Developed the frontend in React with a clean user-friendly interface designed for students and school administrators.
- Built the backend using Node.js and Express handling authentication, payment processing, transaction records, and API endpoints consumed by the frontend.
- Integrated Paystack as the payment gateway to process student payments securely including webhook handling and transaction status verification.
- Implemented role based access for students and administrators with protected routes and session management.

E-Commerce Dashboard

2026

Fullstack Developer (Next.js • MongoDB Atlas)

- Built a full stack e-commerce management dashboard using Next.js for the frontend and server-side rendering.
- Integrated MongoDB Atlas as the cloud database for storing product listings, orders, and customer data.
- Developed dashboard features including product management, order tracking, inventory updates, and sales reporting with real time data.
- Designed a clean responsive admin UI optimized for desktop workflows with fast page loads leveraging Next.js SSR and API routes.

Newsroom Mobile News Reader App

2025 – 2026

Mobile Developer (React Native • Android • Google Play Store)

- Built a mobile news reading application in React Native published and available on the Google Play Store for Android users.
- Implemented category filtering, article search, and smooth in-app navigation between news sections.
- Integrated RESTful news APIs for real time content delivery across multiple news categories.
- Focused on performance and reading experience — optimizing list rendering and image loading for smooth usage across different network conditions.

Field Support Portal SmartApp Technologies

October 2023

Frontend Developer (Angular 17 • Azure AI • Cloud-Native SaaS)

- Built the frontend administrative and configuration portal for a multi tenant SaaS product handling automatic ticket generation, customer support, and remote/field issue tracking.

- Developed using Angular 17 as part of a cross-functional team of 5 working alongside backend engineers, a scrum master, and system architect.
- Integrated Azure AI & Cognitive Services, Azure Maps, and Google Cloud Services into the UI for intelligent, location-aware field support workflows.
- Consumed real time events from an event driven backend to keep UI state accurate and live for both field agents and admin users.
- Built responsive, accessible UI components designed to work well across both desktop and mobile screen sizes.

TSL Hub Law Firm Client Portal

October 2023

Frontend Engineer (React • RBAC • Real-Time UI)

- Built the complete frontend of a secure, multi role portal for managing legal case workflows, client communications, and support requests.
- Implemented role based access control at the UI layer ensuring clients, lawyers, and administrators each saw only the views and actions relevant to their role.
- Built real time notification UIs and live case status updates integrated with backend APIs.
- Applied security aware UX patterns and a scalable component structure appropriate for a legal grade application.

POS Management System Retail Platform

March 2025

Frontend & Integration Engineer

- Built the frontend interface for a Point of Sale system covering inventory management, retail transactions, and sales reporting.
- Developed interactive dashboards for product management, cashier workflows, and real time transaction monitoring.
- Integrated RESTful APIs for order processing, pricing logic, and stock updates — working with the backend team to agree on data contracts and handle edge cases.
- Designed responsive, fast-loading UI components optimized for both desktop POS terminals and tablet based workflows.

ComzAfrica Corporate Website & CMS

November 2024

Frontend Developer (React • Angular)

- Developed the full corporate website and CMS for ComzAfrica, a Rwandan fintech company providing credit facilities for utility services.
- Built the public facing website using HTML, CSS, JavaScript, and React focused on performance, responsiveness, and clean visual design.
- Built the admin portal and CMS in Angular, enabling the client team to manage and update all site content independently without developer involvement.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Dart, Rust, HTML5, CSS3

Web Frameworks: React 18+, Angular 17, Next.js, Three.js

Backend: Node.js, Express, Axum (Rust), Tokio (async), REST API development, CLI tools, Systems Programming

Mobile Development: Flutter & Dart, React Native, Cross Platform iOS & Android, Mobile First UI Design, Google Play Store

Styling: TailwindCSS, Bootstrap, Sass, Less, Flexbox, CSS Grid, Responsive Design, ARIA / Accessibility

State Management: Redux, React Context API, NgRx, Ngx

API & Integration: RESTful APIs, WebSockets, gRPC, SOAP, XML, OAuth / JWT, Paystack, Flutterwave

Build Tools: Webpack, Vite, Gulp, Grunt, Docker

Testing: React Testing Library, Cypress, Unit & Integration Testing

Dev Tools & Platforms: Git, GitHub, GitLab, Jira, Trello, Azure Services, Google Cloud

Soft Skills: Problem-Solving, Critical Thinking, Time Management, Clear Communication, Client Confidentiality, Mentoring

EDUCATION

National Open University of Nigeria Lagos, Nigeria

B.Sc. Computer Science • September 2020 – 2025

CS50 — HarvardX (Remote)

October 2024

Computer Science Certificate

INTERESTS

JavaScript • Redux • Technology • Mentoring • Flutter & Dart • Rust • Three.js • Web3 / Blockchain

LANGUAGES

Yoruba — Native **English** — Fluent
